

CHAPTER V

CONCLUSION AND SUGGESTIONS

This chapter discusses the results and suggestions that have been obtained from the results of the analysis and discussion of the analysis data.

5.1 Conclusion

Based on the results of research in class X5 at SMAN 1 Banda Aceh, it shows that the use of *the Awabe Learn Languages* application is effective in improving students' reading skills. The results can be seen from the comparison of the significance between the pre-test and post-test scores obtained by students. During the learning process, students acknowledged that learning to read using *the Awabe Learn Languages* application was very interactive. This is because there were videos that can be watched to support the descriptive text they were reading.

In addition, students can also directly find translations of the text that has been provided, both verbal and sentence, without having to look for translations in manual or digital dictionaries. This section can help students in understanding the assignment sheet instructions well. Students also look more active and cooperative during the learning process. This is because students were more focused on what they were learning about the reading material given. In addition, students were also more enthusiastic about using *the Awabe Learn Languages* application because students consider the application to be easy to use with a choice of reading materials with a variety of topics.

5.2 Suggestions

What is learned is not only the main source of success in learning. Respond to what the learning process is given, such as the use of appropriate media. In addition to these aspects, of course, the existence of teachers is the most prioritized. Teachers who provide material to students were required to be more creative in choosing media to be used in the learning process to suit the needs of students. This aims to make the classroom atmosphere lively and interesting. Based on the conclusion above, the researcher aims to show several suggestions, including the following;

1. For Students

The results of this research were expected to inspire students to be more active in using learning media that suit their needs. By utilizing this media, students were expected to continue to improve their reading skills and make the process of learning English more enjoyable.

2. For Teachers

This research is expected to be a reference for teachers in choosing learning media that supports the teaching-learning process. By using media that has been proven to be effective, teachers can help students achieve better and more efficient learning outcomes.

3. For Researcher

The researcher hopes that the results of this study can encourage other researcher or related parties to consider the use of similar media in learning. This media can be the main choice when designing learning strategies that aim to improve students' reading skills effectively.
